

 **SHAPE**

The rear-ventilated facade of Fshape is available in a variety of color design options. With this aluminum façade system, façades can be realized in simple gray tones as well as stronger colored accents. This lamella facade always emphasizes the cubature of the building. Both the protrusion as well as the recesses convince through the great plasticity and purity of the form.

The Sparkasse in Rheda-Wiedenbrück is a good example of the high plasticity of the building elements, which is enabled by the Fshape aluminum façade system. This façade convinces with its extremely clean building edges. This is particularly apparent in the case of the building openings that spring inward. At the same time, this

façade also allows openings in a completely flush design. The optical overall appearance impresses with the great clarity of the design. With this facade system, a building can be converted with the same degree of purity as the original design. With this the constructed reality is equivalent to the clear line of the corresponding renderings.

The façade of Sparkasse Altencelle illustrates the very uniform and closed overall impression given by Fshape's aluminum facade system. On the other hand the close view of the youth centre Hollabrunn, on the right, reveals the great playful richness that is achievable within this lamellar façade. If this façade is lined with slats in different shades, a very lively facade is created. This building section also shows how this aluminum façade has a very clear overall shape and at the same time offers a lot of room for detail. Due to this, the façade made of aluminum lamellas, opens up a great creative freedom and almost endless variations in the colour of the surface.

Sparkasse Altencelle and the Brockensammlung reveal the great potential that this facade system displays to enable a plastic building structure. Both, the projecting upper floor of the Sparkasse as well as the rebounding glass façade of the Brockensammlung, have the purity of the form of an absolutely cleanly executed model in the planning phase. This extremely positive overall impression is additionally underlined by the fact that the surfaces of this lamella façade are absolutely smooth. The astonishing design purity also characterizes the very precise contours.

This building is an example of what makes the Fshape aluminum facade system so special: the façade of aluminum lamellas enhances the building cubature and inspires by a very great optical purity. At the same time, the lamellar façade allows for a very lively facade picture due to different tones in the planking.

Type 45-15

Aluminium lamella
Width 45mm
Depth 30mm
Angle 15°
Standard length 3m

Other lengths and
dimensions on
request

Type 45-90

Aluminium lamella
Width 45mm
Depth 30mm
Angle 90°
Standard length 3m

Other lengths and
dimensions on
request

Type 102-15

Aluminium lamella
Width 102mm
Depth 30mm
Angle 15°
Standard length 3m

Other lengths and
